MSCI GLOBAL EQUITY INDEX BOND

GLOBAL EQUITY INDEX BOND | PROTECTED AND GROWTH VERSIONS

This innovative bond provides investors with access to the performance of one of the leading Global Equity Indices, the MSCI World Minimum Volatility Index ('Index'), but with the added benefit of capital security provided by Bank of Ireland. There is no limit to the maximum return that can be earned in these Bonds. There are 2 versions to choose from, the Protected and the Growth Version.

HOW THE BONDS WORK

GLOBAL EQUITY INDEX BOND | PROTECTED VERSION

100% CAPITAL SECURITY PROVIDED BY BANK OF IRELAND

For investors who want full capital security, the Protected Version will return 80% of the Performance from the MSCI World Minimum Volatility Index over the 4 year 6 month investment term. Even if the Index performance is negative over the term of the Bond, 100% of the amount invested in the Bond will be returned. Capital Security at maturity is provided by Bank of Ireland.

EXAMPLE RETURN:

If the Index Performance is 50% the return to investors will be 100% of the invested amount plus 40% (50% x 80%) giving a gross return of 40%, equivalent to 8.9% per annum (CAR 7.8%) (25.6% after DIRT at 36%).

WARNING: These figures are estimates only. They are not a reliable guide to the future performance of your investment. The value of your investment may go down as well as up. If you invest in this product you will not have any access to your money for 4 years 6 months.

GLOBAL EQUITY INDEX BOND | GROWTH VERSION

95% CAPITAL SECURITY PROVIDED BY BANK OF IRELAND

The Growth Version will pay investors 120% of the Performance achieved by the MSCI World Minimum Volatility Index over the 4 year 6 month investment term. This Performance is added to the minimum amount (95% of your investment) that is capital protected. If the Index Performance is less than 4.17% over the 4 year 6 month investment term, you will receive back between 95% and 100% of your investment. In any event, 95% of the amount invested in the Bond will be returned. Capital Security at maturity is provided by Bank of Ireland.

EXAMPLE RETURN:

If the Index Performance is 50% the return to investors will be 95% of the invested amount plus 60% (50% x 120%) giving a gross return of 55%, equivalent to 12.2% per annum (CAR 10.2%) (35.2% after DIRT at 36%).

WARNING: These figures are estimates only. They are not a reliable guide to the future performance of your investment. The value of your investment may go down as well as up. You may get back less than you invest. If you invest in the BCP MSCI Global Equity Index Bond - Growth Version you could lose 5% of the money you invest. If you invest in this product you will not have any access to your money for 4 years 6 months.

PERFORMANCE PROTECTION

In order to protect the performance of the Index from short-term volatility in stock markets towards the end of the term, the Final Price will reflect the average level of the Index on a monthly basis over the final 9 months of the Term. The effect of averaging is to protect returns in a falling market but conversely it may restrict growth in a rising market.

Note: CAR is the Compound Annual Return.

A DESCRIPTION OF THE INDEX

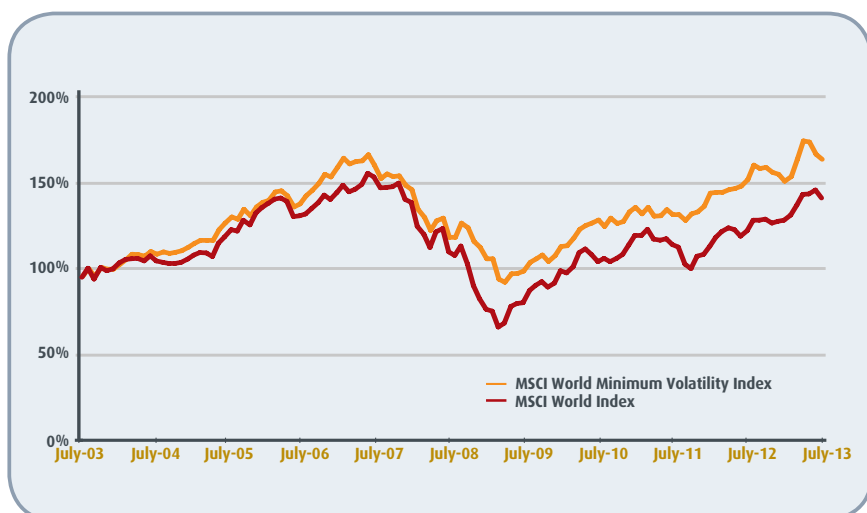

The Index seeks to create a portfolio of stocks from the parent index (MSCI World Index) which has the lowest volatility subject to certain constraints. The Index employs a portfolio optimisation strategy which considers the volatility of each stock and the correlations between stocks. The optimisation process results in overweight positions in low volatility stocks and underweight positions in high volatility stocks. Constraints are applied within the optimisation process to control country, sector and style exposures relative to the parent index. Stock level constraints ensure sufficient portfolio diversification. As a result of this process the Index is similar to the parent index in terms of country and sector weights and provides investors with broad exposure to the performance of the Global equity market.

WHY MINIMUM VOLATILITY?

Recent research has shown that low/minimum volatility stocks have produced higher risk-adjusted returns than portfolios with high-volatility stocks in most markets studied. This anomaly contradicts the markets previous understanding of the relationship between risk and return. The market has an unreasonably high expectation for the performance of high volatility stocks and over time it is in fact the lower volatility stocks that have provided stronger long term performance.

As illustrated in the chart below the MSCI World Minimum Volatility Index has outperformed the MSCI World Index by +14% over the last 10 years, and with lower volatility. The Minimum Volatility Index has also outperformed the World Index by +7% over the last 5 years.

INDEX LEVELS - 10 YEAR PERFORMANCE

Performance is shown from July 1st 2003 to June 30th 2013 in Euro. The MSCI World Minimum Volatility Index was launched on April 14, 2008. Data prior to the launch date is back-tested data (i.e. calculations of how the index would have performed over that time period had the index existed). Source: MSCI.
